

# Sealine Security

## SEALINE

Sealine are an internationally renowned luxury yacht builder, they have had a series of thefts from their Kidderminster Production Facility and they called on the expertise of CTAC to provide a cost effective solution on what is an expansive and demanding site logistically

Sealine's security problems offered up significant challenges for the design team at CTAC. The manufacturing facility is contained in multiple buildings in a shared occupancy estate close to a busy town, add the problem that no total lockup is possible out of hours and a public access road bisects the site and out of hours monitoring has to be specifically targeted to be effective.

CTAC installed multiple Speed Dome Cameras around the site linked to Microwave Detection devices and Audio Horns, the system is then linked back to CTAC's Central Station via the **PROTECTACCESS** remote monitoring system. After hours the system is set and any persons entering the restricted area brings up live pictures in the Central Station, the operator then warns the intruder via the Audio link that they are to leave the area or Police and Mobile Guards will be dispatched. This gives Sealine the comfort of 24 hour guarding without the normal expense as the monitoring service is only £199.00 per month for up to 16 cameras.

Sealine have been so pleased with CTAC that we are currently designing a fully integrated Access Control System to compliment and enhance the on site security.
